**BOSS**   
*An ERP for SMEs worldwide*

[www.thebosserp.com](http://www.thebosserp.com)

Organizational departments often operate in siloes, so there's incomplete communication at a macro level. As departments are interdependent for conducting business-wide operations seamlessly, this siloed approach results in an organization-wide culture of inefficiency. This is where an ERP system comes in handy by improving information sharing and collaboration.

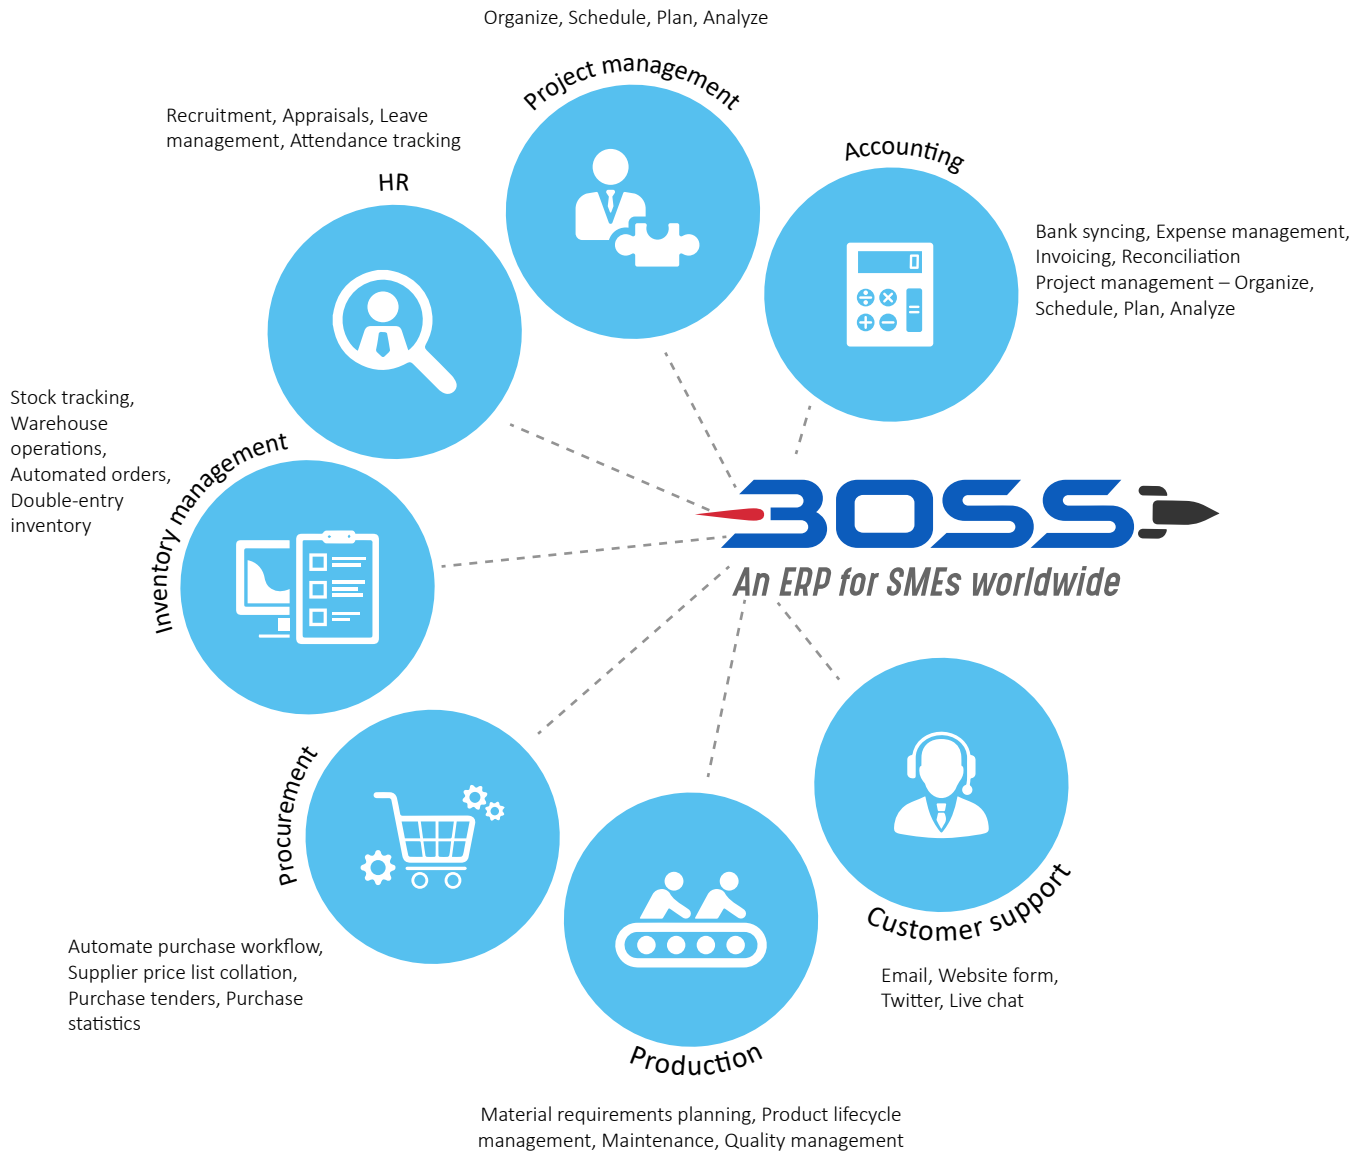

## Common business problems that can be resolved by an ERP:

- ▶ Information is maintained in silos so one department has no access to a complementary department's data, which hampers the department's operations.
- ▶ Decision-makers don't have easy access to crucial information that can help them take strategic business decisions.
- ▶ Accounting personnel must update and reconcile financial information in multiple spreadsheets which results in redundant work and delays the generation of critical reports.
- ▶ Customer experience suffers due to no coordination between sales and inventory departments, resulting in lack of ability to track orders in real time and lack of ability to track inventory volumes in a timely manner.
- ▶ Too many disparate software is being used for multiple organizational process, resulting in a heavy IT investment in maintenance and upgrades.

# What is BOSS

BOSS is a dynamic ERP platform serving the needs of organizations of all sizes and scale by providing them a complete suite of applications that addresses all their operational needs.

Besides serving your operational needs, BOSS also acts as an integrated platform for your sales activities, including:

Sending quotes

Billing

Point of sale

CRM

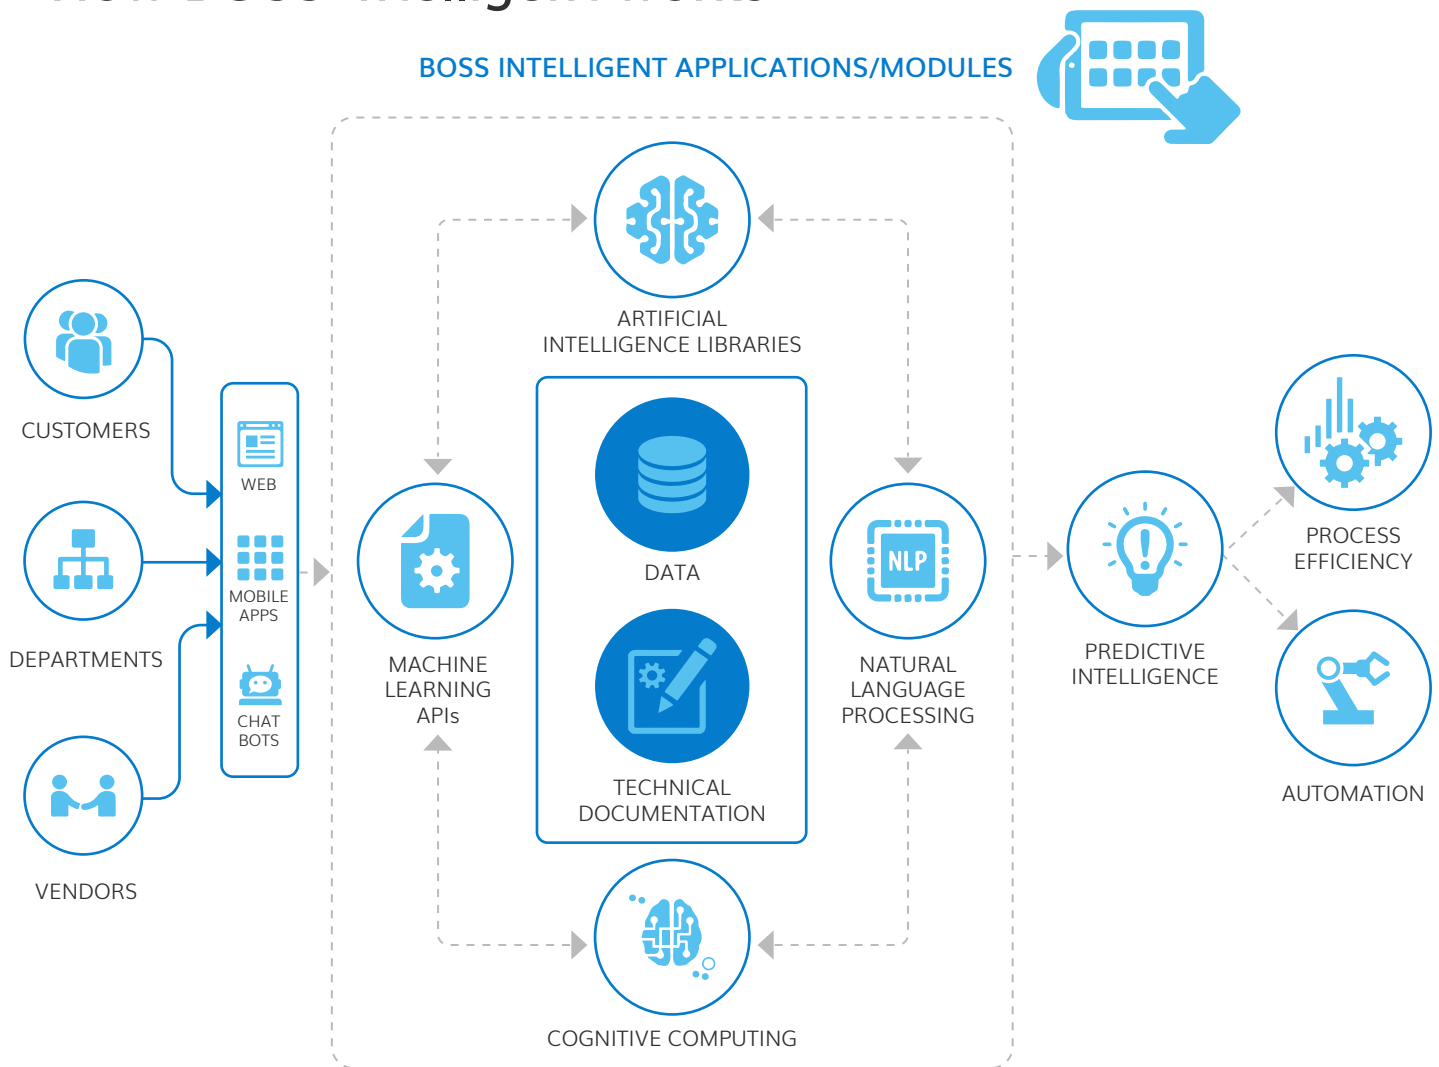

Subscriptions management

# BOSS Intelligent

# Smarter than your average ERP

BOSS Intelligent is not meant only for storing and organizing your business data efficiently and giving you access to useful tools that help you run your processes better. While it does all these quite well, its real standout feature is its intelligent adaptability to multiple scenarios requiring varied and complex workflows, such as customer interactions for multiple issues, inventory management for different classes of inventory, managing diverse HR functions, and so on. The processes involved in handling each of these scenarios effectively require significant man hours, resources and spend. BOSS Intelligent will cut down redundant or avoidable steps in each individual process, resulting in an organization that runs smoothly and cost-effectively due to several labour-intensive processes getting trimmed or running on auto-pilot, while employees freed from these tasks can take up more creative and strategic business activities and add more value to the enterprise.

## How BOSS Intelligent works

# Why BOSS

Using BOSS, businesses can get a bird's eye view of their operations across all functions in an elegant and intuitive interface. Here are some reasons why BOSS can work for your business.

- ▶ **Enhanced collaboration** – The ability to define cross-departmental workflows enables processes across the organization to be handled and tracked smoothly.
- ▶ **Comprehensive process tools** – A large variety of modules are available for enabling all kinds of business processes.
- ▶ **Increase in efficiency** – BOSS will remove several repetitive processes and reduce the necessity of updating information manually.
- ▶ **Advanced reporting** – Users across functions can use BOSS' in-built business intelligence capabilities to run detailed reports and can view complex data in a visually appealing manner.
- ▶ **Improved customer satisfaction** – The ease of availability of transaction data will enable sales and customer service representatives to better handle customer queries and provide better support.
- ▶ **Secure** – All activities occurring on the ERP platform can be tracked, and centralized security policies can be applied.
- ▶ **Centralized backup** – As organization-wide processes are hosted on this platform, it can act as a data and backup repository.

**Explore a user-friendly, high value, cost effective and business-savvy ERP platform.**

# Our Clients across the world

## ABOUT US

Like-minded and highly passionate industry veterans founded Compassites in the year 2005. Today, Compassites has evolved into a trusted technology partner to many global companies. It has incubated over 20 startups during its initial years and has a strong startup DNA. Some of the products that Compassites developed during this time include Jiffle and iCharts. Since the past several years, Compassites has been serving enterprises in their digital transformation journey. The company's focus on cutting-edge technologies like Mobility, Data Analytics, Cloud and Portals form the foundation of its digital transformation journey.

During the past 10 years, Compassites has served many organizations in the US, Europe, Singapore and India, in their product development, application development and maintenance endeavours. Compassites has acted in the capacity of advisor and technology partner while building and maintaining these products and applications.
